RELEQUICK

Relequick™ is a Spanish brand working since 2003 with 100% Spanish capital, dedicated to the design, manufacture and sales of systems and electrical and electronic components, as well as state of the art software for the control of their products, mainly in the market for industrial automation. Currently, it has a wide range of over 900 different products developed and manufactured according to the highest international standards and approved by the appropriate agencies within each sector in which we operate, in particular, IEC, VDE, CE , RoHS, ISO-9000, etc..

Innovation is one of the basic pillars of Relequick™ culture that deeply marks all its business areas to achieve the highest levels of efficiency, quality and respect for the environment.

1.- Relays and socket "T" series

- 3 - General characteristics
- 5 - RM-T relays, SM-T sockets
- 7 - RQ-T relays, SQ-T sockets
- 9 - RF-T relays, SF-T sockets
- 11 - RF-PT relays
- 12 - RVS relays, SVB sockets
- 13 - RM-FT Power relays
- 15 - RPA Power relays

2.- Relays and socket Standard series

- 17 - RM relays, SM sockets
- 19 - RQ relays, SQ sockets
- 21 - RF relays, SF sockets

3.- Solid state relays and heat sinks

- 25 - Zero crossing AC single phase
- 26 - Random AC single phase
- 27 - Solid state relay DC single phase
- 28 - Solid state relays angle switching
- 29 - DIN single phase solid state relays
- 30 - Power solid state relays
- 31 - PCB single phase relays
- 32 - PCB Single phase power relays
- 33 - Three phase relays
- 34 - Motor reversing relays
- 35 - Heat sinks

4.- Modules and monitoring relays

- 39 - RFS1SL Programmable solid state relays
- 40 - MQPMM timer and counter module
- 41 - Slimline timer
- 42 - Modules standard for SQ/SF
- 43 - Current monitoring relay
- 44 - Three phases monitoring relay
- 45 - GSM modules
- 47 - Software "Devices Programmer"
- 49 - Programmable functions

Implementation Rules

In the design and fabrication of Relequick® products described in this catalog it has been taken into account the European and International standards (International Electronic Commission) applicable in each case:

IEC/EN 61810-1, IEC/EN 61810-2, IEC/EN 61810-7 (relays);
IEC/EN 61812-1 (timers);
IEC/EN 60669-1 and IEC/EN 60669-2-1 (control relays, etc);
IEC/EN 50178 (Industrial Use);
IEC/EN 61810-1(thermal conditions, etc.)

Electromechanical relays

General characteristics

Continuous Operation: Permanent connection of the coil up to balance thermal relay.

Electrical life: Represents the duration of normal use of the relay with a rated resistive load at nominal current AC1 specified for that relay and a voltage of 250 VAC.

Mechanical life: If the load on the relay contacts is very low electrical life can approach to mechanical life.

Operating time: Average time (once the coil is energized) until the closing of NO contact.

Release time: Average time (once the coil has been de-energized) to the NC contact closure relay changeover contacts, or up to the opening of NO contact on a open contacts relay.

Ambient temperature: The temperature of the environment in which the relay can work.

Storage temperature: Room temperature with upper and lower limits extended by about 10 ° C.

Protection category: according to EN 60529.

IP 00 = No protection.

IP40 = Protected against solid foreign objects of Ø 1 mm or greater. No protection against the entry of water.

IP50 = Dust protection in an amount or in some places that may impair the proper functioning of the relay.

No protection against the entry of water.

IP54 = As IP 50, but protected against splashing water (limited penetration is allowed).

IP67 = Total protection against dust and protected against the effects of temporary immersion in water.

Isolation areas: For electromechanical relays isolation areas to consider are according to IEC 61810-1:

- The isolation between the coil and all contacts.
- The separation between adjacent contacts in a multipolar relay.

Pollution degree: The EN50178 imposes a pollution degree of 2 to electronic equipment in power installations. The degree of pollution 2 and 3 are normally required to relays:

- 1 Without pollution or dry non-conductive pollution.
- 2 There is only non-conductive pollution.
- 3 Conductive pollution occurs or dry pollution that becomes conductive due to condensation.
- 4 Pollution generates conductivity which is maintained due to dust that is conductive or atmospheric agents.

Vibration Resistance: According To IEC 60068-2-6 The maximum value of acceleration g can be applied to an relay without opening contact.

Torque: According to EN 60999 refers to the maximum torque supported by terminal screws connection on Nm.

Quick-clamp quick connection: The conductor is clamped by force of a spring made of steel plate without the need for screws.

Compliance with RoHS Directive: RoHS is the acronym for "Restriction of Hazardous Substances", European Directive 2002/95/EC of 27.01.2003 regulating substances under restrictions: Lead, Mercury, Hexavalent Chromium, Polybrominated Biphenyls (PBB), Polibromobifeniléteres (PBDEs), Cadmium (Having exceptions on contact materials).

Contact specifications

Nomenclature of contacts:

Contact normally open (Europe = NO, GB = A, USA = n * PST-NO)
Contact normally closed (Europe = NC, GB = B, USA = n * PST-NC)
Changeover contact (Europe = CO, GB = C, USA = n * PDT)
n* = number of poles (single = 1, double = 2, etc)

Nominal current: Is the highest current that a contact can lead permanently without exceeding the heating limits and coincides with the maximum operating current.

Maximum peak current: Is the higher current than the contact can make for less than ½ second and with a lower RI intermittence 10% without any degradation.

Nominal voltage: Is the switching voltage associated with the rated current that determines the rated load AC1.

Maximum switching voltage: The maximum voltage level that can switch contacts and that can ensure the isolation distances specified by the rules.

Rated load AC1: The maximum power switchable by contact, for a resistive load on AC that is able to connect and disconnect repeatedly. It is used in the tests on electrical life.

Contact resistance: The Ohmic resistance measured between the contacts of the relay.

Contact material: The alloy of which are made of relay contacts, normally usually AgNi (PlataNiquel) AgCdO (Silver Cadmium Oxide), AgSnO2 (Silver Tin Oxide).

Characteristics of the coils

Nominal supply voltage: Voltage planned to be supplied in the coil of the relay design.

Rated power: Is the DC power on W or the AC apparent power on VA consumed by coil when is energized with the nominal voltage at an ambient temperature of 25 ° C.

Operating range: According to EN 61810-1 our relays are classified into Class 1: (0.8 ... 1.1) A, both relays with AC coils, like DC, within the temperature range covered by the standard.

Rated coil resistance: Is the ohmic resistance of the coil (within a tolerance of ± 10%) at 25 ° C ambient temperature.

Solid state relays

General characteristics

Description: A solid state relay (SSR) is an electronic switch, that doesn't contain any moving parts. The charging current is conducted by one or more semiconductors such as transistors and thyristors or triacs in substitution of metal contacts. Used for controlling high power loads signals starting from low voltage control and intensity. Solid state relays are widely used in test instruments, monitors, appliances, cars, etc.

In comparison to electromechanical relays are lighter, quieter, faster and more reliable, do not wear, are immune to shock and vibration, generate very little interference, switch high currents and voltages without producing arcs, provide several kilovolts of isolation between input and output.

Opto-coupler: The opto-coupler in all our solid state relays, ensures electrical isolation between input and output circuits.

Minimum switching current: Is the minimum current required to make a proper load switching.

Maximum load current: Maximum current that can continuously pass through output terminals using a specific heatsink.

Zero crossing: Circuit which starts the operation when the voltage at the AC load has a value close to zero.

Control current: Is the nominal input current at 23 °C for the rated voltage.

Timers

General characteristics

Timing Adjustment: These are the values that can be established specific timed using timescales of the product or making a program on it.

Repeatability: Is the maximum difference between two results obtained by making a sufficient sample time measurements on specific conditions that can be attributed to the accuracy of the test method, and that it is given as mean value.

Time precision Is the absolute percentage error is expressed in % of the peak value it measures the instrument, and also expressed in % with respect to the difference between maximum and minimum value measurable.

Reestablishment time The minimum time necessary before re-starting the timer function.

Control modules

Three phase monitoring module

Voltage reading range: Is the read range of voltage that the module can detect and monitor.

Percentage of asymmetry: It is given in % and represents the theoretical phase shift distance of 120° between the phase-phase phasors voltage on a three-phase.

Hysteresis: Is a % of the value which has been established below which the control module is reset.

Current monitoring module.

Current reading range: Is the read range of current that the module can detect and monitor.

Lock Time: Is the delay time of alarm activation after current exceeded the set threshold.

Switch-on delay: this refers to the time taken for the output relay to energise, following the detection of conditions requiring this.

Features

Universal power relay for general applications.
 Available in 2 & 3 change-over contacts with max. current 10 A - 250 VAC1 / 28 VDC1.
 Nominal power 1,5 W(DC) & 2,7 VAC.
 Available with and without LED for AC/DC relays. Diode only available for DC.
 Socket terminals, 8 pins plug-in for 2 contacts and 11 pins plug in for 3 contacts.
 Insulation: IEC61810-1 - 2,5 KV/3.
 Pollution degree: 2.
 Approvals: CE
 Protection class: IP40.
 European Patent.

Electrical life RFS2-PT

Features

Industrial interface relay for general applications.
 Available in 1 and 2 change-over contacts with max. current 16 A - 250VAC1/30VDC1 and 8 A - 250 VAC1/30VDC1.
 Coil nominal power DC 0,4 W.
 Insulation: IEC61810-1 - 2,5 Kv/3.
 Pollution degree 2.
 Socket 187 (4,75 mm) terminals.
 Approvals: CE
 Protection class: IP67
 European Patent.

Coil ratings

Nominal voltage VDC	6	12	24	48	115	-
Resistance ($\Omega \pm 10\%$)	60	353	1,37K	4,3K	22,8K	-
Nominal voltage VAC	6	12	24	48	120	230
Resistance ($\Omega \pm 10\%$)	16	63	240	1K	6,7K	21K

Coil values (at 25 °C)

	VDC	VAC 50Hz
Operating range	0,75 - 1,1 Un	0,8 - 1,1 Un
Max. drop-out voltage	$\geq 10\%$ Un	$\geq 30\%$ Un

Contacts

Contact arrangement: 1C and 2C. (230 VAC1/28VDC1)
 Maximum contact power: 1C:2.500 VA / 300 W, 2C: 1.250VA / 150W.
 Maximum voltage: 250 VAC / 220 VDC.
 Maximum current: 16A 1C and 8 A 2C AC1/DC1
 Maximum breaking capacity: 110V DC ---> 0,4A
 220V DC ---> 0,15-0,20A
 Contact resistance: ≤ 50 m Ω .
 Contact material: Silver alloy (AgNi).

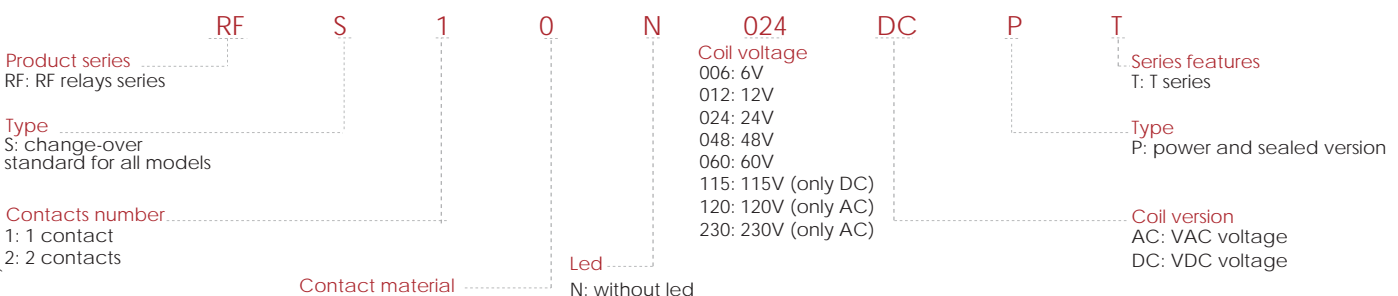

Specifications RF-PT

Electrical life	$\geq 10^5$ cycles
Mechanical life	$\geq 10^7$ cycles
Insulation resistance	≤ 1000 M Ω (500VDC)
Operation time	≤ 20 ms
Operation frequency	1200 op/h at nominal load
Release time	≤ 10 ms
Dielectric strength at 1mA	5.000VAC/min(between coil and contacts) 1.000VAC/min(between contacts)
Vibration resistance	10 - 50 Hz (Double width 1,5mm)
Shock resistance	10 g
Room temperature	-40 °C + 70 °C
Room humidity	35% - 85% RH
Atmospheric pressure	86 - 106 KPa
Weight	12 gr
Pack units	100

The sockets for these relays are the "SF SERIES" page 10.

References RF-PT relays

Example: Relay RF. 1 contact, 24VDC coil voltage.

Features

Miniature relay for PCB.
 Available in 1 change-over contact with max. current 6A(AC1 / 250V; DC1 / 30V).
 Nominal power: 5, 6, 9, 12, 18, 24 VDC (170mW);
 48 VDC & 60 VDC (210mW).
 Miniature, low consumption, high response and sensitivity relay.
 PCB terminals.
 Approvals: CE
 Protection class (RVS): IP67
 IEC 60664

Coil ratings

Coil temperature

Electrical life

Features

Universal power relays for general applications with faston terminals, specially designed to have a high resistance to the wearing down in inductive load applications, for DC current.

- Nominal power 1,5W(DC) & 2,4 VAC.
- Low consumption and high response.
- Protection class: IP40.
- Insulation: IEC61810-1 - 2,5 Kv/3.
- Pollution degree: 2.
- Contact material: (Ag+ Ni)
- European Patent.
- Approvals: CE

RME2-FT & RME3-FT change-over contacts

Available in 2 & 3 change-over contacts with max. current 16 A - 250 VAC / 30 VDC

RMS2-FT & RMS3-FT change-over contacts with LED & button

Available in 2 & 3 change-over contacts with max. current 16 A - 250 VAC / 30 VDC

RMEA2-FT & RMEA3-FT open contacts

Power relay faston terminals, special designed for DC charge Applications with 1,5 mm GAP.
Available in 2 & 3 open contacts with max. current 16A - 250 VAC / 30 VDC & 1A - 220 VDC

RMED-FT 1 open contact with double and triple make

universal power relay faston 1 open contact double and triple make, designed with higher GAP to obtain more switching capacity for DC current in inductive charges.

RMED 1 Double make

1 open contact with double make 3A/220 VDC1 - GAP ≥ 3mm.

Available in 1 contact with max. current 16A (250VAC/30VDC)

RMET 1 Triple make

1 open contact with triple make 3A/220 VDC1 - GAP ≥ 4,5mm.

Available in 1 contact with max. current 16A (250VAC/30VDC)

*Triple make use with socket SMB31D11TFT only.

Operating range	0,75-1,1 Un	0,8 -1,1 Un
Max. drop-out voltage	$\geq 10\%$ Un	$\geq 30\%$ Un

Contacts

Contact arrangement: 1C and 2C.
 Maximum contact power (230BAC1 / 28 VDC1):
 1C: 2.500VA / 300W
 2C: 1.250VA / 150W
 Maximum voltage: 250VAC / 220VDC.
 Maximum current: 10A and 5A. (250AC1/30DC1)
 Maximum breaking capacity: 110VDC \rightarrow 0,4A
 220VDC \rightarrow 0,15-0,20A
 Contact resistance: ≤ 50 m Ω .
 Contact material: Silver alloy (AgNi).

Specifications RM

Electrical life	$\geq 10^5$ cycles
Mechanical life	$\geq 10^7$ cycles
Insulation resistance	$\leq 1000M\Omega(500VDC)$
Operation time	≤ 20 ms
Operation frequency	1200op/h at nominal load
Release time	≤ 10 ms
Dielectric strength at 1mA	5.000VAC/min(between coil and contacts) 1.000VAC/min(between contacts)
Vibration resistance	10 - 55Hz (Double width 1,5mm)
Shock resistance	10g
Room temperature	-40 °C +65 °C
Room humidity	35% -85% RH
Armospheric pressure	86 - 106 kPa
Weight	22gr
Pack units	10

Accessories for relays

- Mechanical indication and a wide window.
- 3-sequential-position test button (free, check, lock).
- Colours for an easier identification of coil voltage (DC blue, AC red).
- Technical information and coil voltage in frontal part, laser printed.
- Interchangeable marking labels.
- They can be easily interchanged or replaced, enabling the relays and sockets identification.
- Connection bridges allow the connection of A2 coil terminal contacts in the Q & F series, thus reducing wiring time and effort.

AFE

AFP

Features

- Interface I/O (Input/Output).
- Interchangeable marked labels option, and clip integrated DIN rail (35 mm, T35) or panel mount (EN 60715).
- Connection Bridges for A2 terminals.
- Industrial faston or PCB relay mount.
- 3-position clip for subjection to DIN Rail.
- DIN/EN sequential numbering (optional).
- According to IEC/EN61810.

Specifications SFB10–SFR10, SFB20–SFR20

- The SF sockets are produced in 2 versions with or without MF-series module insertion (see the modules pages).
- Nominal load 1C;16A (250V); 2C: 8A (250V)
- Dielectric strenght 2,5KV
- Max. screw torque 1,2Nm
- Screws M3 Steel. Pozi drive
- Quick Clamp Stainless steel
- Wire in lets capacity: solid wire 4mm² or 2 x 2,25mm²
- Wire in lets capacity: multi-core 22 – 14 AWG
- Protection class: IP20
- Room Humidity -40° to 70°
- Weight 49gr
- Pack units 10

RELEQUICK

SOLID STATE RELAYS

Zero crossing AC SSR

- » Single phase 2 input ranges: 3-32VDC and 90-250VAC.
- » Maximum load current (AC1 at 25° C): 25, 60, 80, 100A.
- » Operational ratings: 40 - 440 VAC.
- » Frequency range: 50- 60 Hz.
- » Maximum non-repetitive peak voltage: 930 Vp.
- » LED indicator.
- » Clip on protective cover for greater safety (IP 20).

MODULES

RFS1SL Programmable solid state relay

This electronic module (plug and play in our sockets SF) is a solid state relay that can be programmed with different time functions and PWM.

References

Reference	Polarity output	Output voltage
RFS1SL028DC0P	DC positive common	5 - 50VDC
RFS1SL028DCNP	DC negative common	
RFS1SL028AC0P	AC random	1,5 - 250VAC
RFS1SL028ACZP	AC zero cross switching	

Functions

The RFS1 have different functions easy to program:

- Timing functions: simple or cycles.
- Control PWM.

For more information look the page 48.

Dimensions

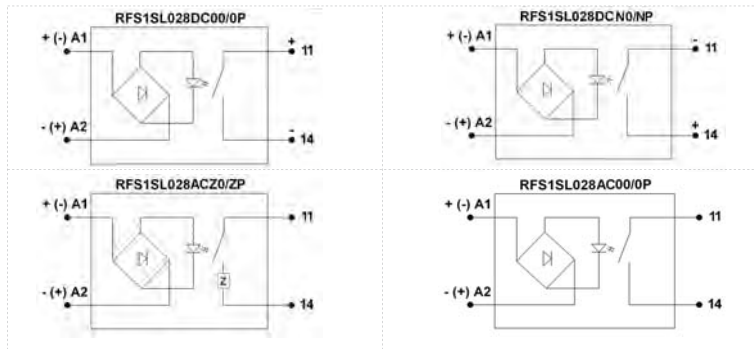

Load current / temperature

Uses and applications

All program timing functions at very fast switching time, because it is a Solid state relay, with relay output 250VAC (3A) or 50VDC (2A).

Circuit diagrams

Accessories

To program by usb is required cable ref CPCD01.

Features

This module have 9 different time functions. The program range is from 0,1 second to 999 hours timing.

There are RFS1 modules in VAC output (zero crossing and random) and other in VDC output (with different polarities).

The led allows to see the relay status.

Our free software "DEVICES PROGRAMMER" allows to make a chain of time and PWM functions in a very easy way.

Nominal values

Supply voltage	5 - 28 VDC
Programming time range	1ms - 999Hours
Time precision	±0,05% of set time
Repeatability	±0,01% of set time
Reestablishment time	>300ms
Indicator(indicates the state relay output)	Green led

Input ratings

Input current (max)	10 - 20 mA
Pick-up voltage	5 VDC
Drop-out voltage	3 VDC
Max. reverse voltage	28 VDC
Max. response time pick-up	1 ms
Max. response time drop-out	2 ms

Specifications

Room temperature	Working T°	-20° C to 60° C
	Storage T°	-20° C to 100° C
Room humidity	5% to 85 %	
Supply frequency (AC)	50 - 60 Hz	
Output relay	Maximum load current (AC51 @ Ta = 25° C)	3 A(AC) 2 A(DC)
	Load voltage range	1.5 - 250 VAC 5 - 50 VDC
	Maximum non-repetitive peak voltage	250 VAC 150 VDC
	Maximum non-repetitive peak current (t = 5 ms)	20 Ap
	Maximum off state leakage current	1 mA
	Min. off state dA / dt	5 A / 350 µs
	Max. on state voltage	<1.5 VAC <1.5 VDC
	Min. load current	≥0.1 A
	I ² t (5 ms) (orientative data)	1 A ² s
	Insulation dielectric strength (between input & output)	3,750 KV
Mounting	Faston standard form	
Dimensions	29x13x40	
Weight	23 gr	
CE- marking	yes	
Protection class	IP20	
Pack Units	10	

This electronic module (plug and play in our sockets SQ and SM) can be programmed to control the relay that is connected in the socket and work according with the program working in many ways.

It allows that one standard relay works like an output miniPLC with a wide range of current and voltages.

Reference

Reference	Type
MQPMM (easy control)	plugin timer module

Functions

The MQPMM has different functions easy to program:

- Timing functions: simple or cycles.
 - Counter: simple or cycles.
 - External signal: timing or counting according with the program.
- For more information look at the pages 49 and 50.

Dimensions (mm-inch)

Uses and applications

Switching and programming the module in our socket, you get more advantages in your applications.

Example: you can have a timer and a counter for resistive or inductive charges with a relay output 230VAC, 16A only switching our MQPMM in the SQ socket with the adequate relay.

Accessories

- It is necessary to program, use the cable ref: CPCD01.
- Interface MMA10 to use the MQPMM in the socket SM.

Features

This module has 21 programmable functions, the timing range is from 0,1 second to 999 hours and a counting capacity until 999 cycles with high precision.

It can be used with different relay models because the MQPMM has a wide range of charges (24-230VAC, 12-115VDC). The LCD allows to see the program status and the relay activity.

Our free software "DEVICES PROGRAMMER"* allows to make a chain of time and count in a very easy way.

It is possible to program the MQPMM with the buttons without the PC.

The B connection in the socket allows a external signal, from a PC, sensor, push button etc... allowing to change the relay status.

Nominal values

Supply voltage (U)	VAC (50 / 60 Hz) VDC	24 - 230 12 - 115
Timing range	0,1seconds - 999 hours	
Counter range	1 - 1000000	
Timing precision	± 0.05 % of set time	
Repeatability	± 0.01 % of set time	
Reestablishment time	≥ 300 ms	
Minimum B signal duration	≥ 23 ms (VDC) - 50 ms (VAC)	
Maximum counter frequency	21Hz (VDC)-10 Hz (VAC) (125 Hz under request)	
Indicator(LCD)	program mode and relay output state	

Specifications

Room temperature	Working T° Storage T°	-10° C to 60° C -20° C to 60° C
Room humidity	5% to 85 %	
Supply frequency (AC)	50 - 60 Hz	
Nominal power AC/DC (W)	0.1 W (12 VDC) - 0.5 W (115 VDC)	
Mounting	Interface in SQ series and SM series sockets	
Dimensions	43,5x24x21,8mm	
Weight	11gr	
CE - marking	Yes	
Protection class	IP20	
Pack Units	1	

the electronic programmable module has been specifically designed for timing and controlling 5,08 mm PCB relays. The module can be mounted on a DIN-rail and thanks to its 6,22 mm width and compact design it will take up minimum space on any control panel.

With its 6 different functions and the wide timing range available (from 0,05 seconds to 10 hours) the module offers great control versatility within a reduced space.

Functions

Function	Diagram
On delay (switch-on delay)	
On pulse (switch-off delay)	
Fixed pulse	
Symmetrical cycle (start ON)	
Symmetrical cycle (start OFF)	
Asymmetrical cycle (start ON)	

Dimensions (mm-inch)

Features

Programmable multi function electronic device. Up to 6 functions can be configured with 3 trimmers and using 6 different time scales:

- [0,05 - 1] [0,5 - 10] [5 - 100] seconds
- [0,5 - 10] [5 - 100] minutes
- [0,5 - 10] hours

Compact design (6,22 mm), easy mounting and wiring.

SPDT 1-relay output with switching capacity of 6A.

Rail DIM 35mm (T35).

Timing range: 0,05 seconds to 10 hours.

LED indication of relay excitation.

One model covers the whole tension range 12 - 24AC/DC.

Easy programming: This timer can be programmed using a lower scale to adjust their values better. Once the value is programmed, the scale can be changed to the adequate level to be used in operating mode.

Numbering identification label relay.

Retaining clip relay, Anti Shake.

Nominal values

Supply voltage	from 0,8 to 1,1Un (12-24 VAC/DC)
Rated power	0,5W
Programming timing range	0,05 seconds to 10 hours
Operation time	0,01 seconds
Timing precision	± 1% of set time
Indicators	Relay excited Green LED
Output relay	1 SPDT relay with 6A switching capacity (AC1 / 250 V - DC1 / 30V)
Breaking capacity	6/0,2/0,15 (DC1 30/110/220V)

Uses and applications

It is often useful in all kind of systems, from industrial applications and buildings. With our programmable timer module it is possible to adjust how the system must work, and it's different programmable functions make it useful in a wide range of possible environments.

Specifications

Room temperature	Working T°	-10° C to 60° C
	Storage T°	-20° C to 70° C
Room humidity		5% to 85 %
Supply frequency (AC)		50 - 60 Hz
Output relay	Resistive load	6A at 250VAC (cosφ =1) 6A at 30VDC (L/R = 0 ms)
	Inductive load	1A at 250VAC (cosφ=0.4) 1A at 30VDC (L/R = 7 ms)
	Electrical life	≥10 ⁴ cycles
	Mechanical life	≥10 ⁷ cycles
Max. screw torque		0.6Nm
Mounting		DIN-rail
Dimensions		6,22 x 90 x 76 mm
Weight		23 gr
CE - marking		Yes
Protection class		IP20
Pack Unit		20

This timer can be used with 12VDC and 24VDC relays.

The use of indication and protection modules increases the relays life and verifies their state.

Use them to avoid the destructive effects from the peaks produced by the variation of current when the relays are used with inductive charges.

Free-wheeling diodes, varistors, or RC (snubber circuits) are very useful in these cases.

Dimensions (mm-inch)

Functions

Function	Operating Range	Code		Diagrams	Description
		SF	SQ		
ByPass Module	(110-230VAC)	M11F	M11Q		Bypass module is used between 110-230VAC. The module prevent the residual currents that may arise, affecting the relays coil.
Led + Diode module standard polarity	(6 -24 VDC)	M12F	M12Q		LED + Diode Module is used in VDC, if the led is lit, the relay is energized. The negative peak voltages are shorted by the diode in parallel. The positive is connected to A1 contact.
	(48 - 60 VDC)	M22F	M22Q		
	(110-230VDC)	M32F	M32Q		
Led + Diode module inverse polarity	(6 -24 VDC)	M13F	M13Q		LED + Diode Module is used in VDC, if the led is lit, the relay is energized. The negative peak voltages are shorted by the diode in parallel. The positive is connected to A2 contact.
	(48 - 60 VDC)	M23F	M23Q		
	(110-230VDC)	M33F	M33Q		
Led module	(6 -24 VAC/VDC)	M14F	M14Q		LED Module is used in VAC/VDC, if the led is lit the relay is energized, for the VDC it should be noted that the positive must be connected to A1 contact.
	(48 - 60 VAC/VDC)	M24F	M24Q		
	(110-230VAC/VDC)	M34F	M34Q		
RC module	(6 -24 VAC/VDC)	M15F	M15Q		RC Module is used in VAC/VDC. The RC circuit protect the coil from the voltage spikes.
	(48 - 60 VAC/VDC)	M25F	M25Q		
	(110-230VAC/VDC)	M35F	M35Q		
Led + Varistor module	(6 -24 VAC)	M16F	M16Q		LED + Varistor Module is used in VAC relays, the varistor limits the voltage spikes that can reach the relay coil. The LED indicates if the relay is energized. For VDC be noted that the positive must be connected to A1.
	(48- 60 VAC)	M26F	M26Q		
	(110-230VAC)	M36F	M36Q		
Rectifier + LED module	(6 -24 VAC)	M17F	M17Q		Rectifier + LED Module is used in VDC, The module rectifies the AC input to allow excite coils with currents in DC. The LED indicates if the relay is energized.
	(48- 60 VAC)	M27F	M27Q		

This electronic current monitoring relay has been specially designed to control the intensity on single-phase AC/DC circuits. It compares the set intensity value to the real intensity supported by the circuit, activating the alarms and outputs of the relevant relays in order to protect the system against over and undercurrent between 0,5 and 10A (250 V). For currents greater than 10A a transformer is used (view diagram).

Functions

Functions 0 to 14 can be configured on a PC with our Devices Programmer software. The user can then load them onto the module with the cable (CPCD01) provided by Relequick, S. A.

Features

The module can be used in two different ways:

Manual mode: configure the function n° 0 only using the trimmer.

Programming mode: With our "Devices Programmer" software* it is possible to program easily up to different functions.

Over, under and window current monitoring with a measuring range from 0,5 to 10A.

Adjustable switch-on/off delay. LED indication of power and alarm.

There are 2 models, with different power supply voltage.

Nominal values

Supply voltage	from 0,8 to 1,1Un12 - 24 VAC/VDC
	from 0,8 to 1,1Un110 - 230 VAC/VDC
Current reading range	0,5 - 10 A (AC/DC; without transformer) 20- 200 A with commercial CT
Current precision	AC ± 5% of full scale
	DC ± 5% of full scale
Switch-on delay	AC 0,02 seconds
	DC 0,2 seconds
Programming time range	0,1 seconds -999 hours
Time accuracy	± 1% of full scale error
Repeatability	± 0,01% of set time
Indicators	Red LED Alarm
	Green LED Supply

Specifications

Room Temperature	Working T°	-10 °C to 45 °C (24 V) -10 °C to 60 °C (230 V)
	Storage T°	-40 °C to 70 °C
Room humidity	25% to 85%	
Supply frequency (AC)	50 / 60Hz ± 5Hz	
Overcurrent transient (burst) - 100 ms	50A	
Output relays	Resistive load	6 A at 250 VAC (cosφ =1) 6 A at 30 VDC (L / R = 0 ms)
	Inductive load	1 A at 250 VAC (cosφ =0,4) 1 A at 30 VDC (L / R = 7 ms)
	Mechanical Life	10 ⁷ cycles
Electrical Life	3 x 10 ⁴ cycles	
Max. screw torque	0,8 Nm	
Mounting	DIN-rail (35 mm)	
Dimensions	22,5 x 76 x 105 mm	
Weight	115 gr	
CE marking	Yes	
Protection class	IP20	

Connection diagrams

Uses and applications

Protection of engines against over- and/or undercurrent.

Detection of resistor failures on heating systems.

Current consumption control.

Security applications for the industry, buildings, lighting etc.

Dimensions (mm-Inch)

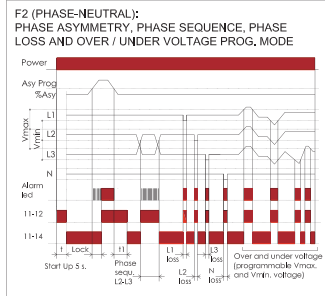

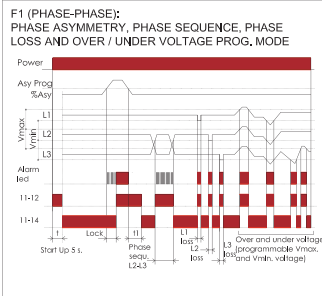

This electronic digital programmable relay has been specially designed to monitor the voltage asymmetry, loss of phases sequence and loss of phase for three-phase power systems.

References

Modules Reference	Input and measure voltage

DEVICES PROGRAMMER	Software

Functions

Functions 0 to 3 can be configured on a PC with our Devices Programmer software. The user can then load them onto the module with the cable (CPCD01) provided by Relequick, S. A.

Uses and applications

The asymmetry, sequence detection and phase loss monitoring has great applications in industry, buildings, and all kinds of electrical installations, both in load monitoring, as in protection of machines or small installations.

Some common applications are the following:

- » Protection and prevention due to an imbalance of the asymmetric or one phase loss or the inverse of sequency power in any kind of three phase motors.
- » Preventing damages or overheating in the engines.
- » Motors, pumps, compressors, forklifts, generators... all of them may be protected with this device in case of phase failures.

Features

The module can be used in two different ways:

Manual mode: configure the function n° 1 only using the trimmer.

Programming mode: With our "Devices Programmer" software it is possible to program easily different functions, as the percentage values of asymmetry and time delay.

The powering of the module is the same three-phase voltage to be monitored.

The module can detect asymmetry fails from 2% to 22% of nominal voltage, the voltage range from 200 to 480VAC. Adjustable switch-on/off delay.

Led indications of power, status relay and alarm.

Models with 2 different voltage range of power supply.

Nominal values

Supply voltage	200 - 240 VAC	380 - 480 VAC
Voltage asymetry range	From 2% until 22% of nominal voltage	
Voltage reading precision	± 2% of full scale	
Switch-on delay	0,02 seconds	
Programming time range	0,1 seconds -145 seconds	
Time accuracy	± 1% of set time	
Repeatability	± 0,01% of set time	
Indicators	Red LED	Alarm
	Green LED	Supply
	Yellow LED	Relay status

Specifications

Room Temperature	Working T°	-10 °C to 60 °C
	Storage T°	-40 °C to 70 °C
Room humidity	25% to 85%	
Supply frequency (AC)	50 / 60Hz ± 5Hz	
Burst current 100 ms.	400 A, 100 ms max.	
Output relays	Resistive load	6 A at 250 VAC (cos φ = 1) 6 A at 30 VDC (L / R = 0 ms)
	Inductive load	1 A at 250 VAC (cos φ = 0,4) 1 A at 30 VDC (L / R = 7 ms)
	Mechanical Life	10 ⁷ cycles
	Electrical Life	3 x 10 ⁴ cycles
Max. screw torque	0,8 Nm	
Mounting	DIN-rail (35 mm)

Weight	150 gr (5.29 Oz)	
CE marking	Yes	
Protection class	IP20	

Connection diagrams

Dimensions mm (Inch)

SMX-80 module is the solution for the remote monitoring and control of the temperature.

The SMS temperature information will be received in the mobile phone, also the variations of all values, installation state and fails.

The mobile phone sends a SMS to the module programming the relays output and control the device.

The Kit has SMX-T80 antenna FME and power supply.

Functions

- » Output relay control by SMS, (2 output relays).
- » Battery supply option to avoid electricity fails. Inform of power supply failure by SMS.
- » Inform of the temperature changes according with the program by SMS.
- » Inform of connection fail or failure of the temperature sensor by SMS.
- » First relay can be programmed to work as a thermostat.
- » Second relay can be programmed according with the temperature value setting.

Dimensions (mm-inch)

Accessories

- » Temperature sensor "SMX-TEM".
The external temperature sensor has a range between -25 °C to 85°C.
- » Battery "SMX-BAT".
Plum battery of 2V with 800mA, in box format with jack connector for SMX-T80.
- » Antennas "SMX-AN1" and "SMX-AN2".
- » Rail DIN accessory "SMX-DIN".

Features

- Programmed by SMS and protected by password.
- Information reforwarding without further configuration.
- Two switch-buttons for the manual control of the relays.
- Manual push button to recharge the temperature advices programmed. Reset push button to return factory program.
- Two output relays are prepared for control for Switch-on or off and timing.
- One relay can be adjusted as a thermostat (adjustable hysteresis) with two working ways:
 - » Hot mode: Close when T° is lower than the T° programmed.
 - » Cool mode: Close when T° is upper than the T° programmed.
- Any change on the relay 2 when there are an advice of temperature change can be made in three ways:
 - » Automatic: reestablish the alarm when the temperature return to the programmed values.
 - » Forced: Maintain fix the last advice produced.
 - » Timing: Avoid a large number of alarm messages (SMS).

Nominal values

Supply voltage	Supply not battery charging	10 - 28V	
	Supply battery Charging	17 - 28V	
Communication	GSM 4 bands 800/900/1.800/1.900 MHz		
	Cinterion modem MC55i		
Modem reboot delay in case of signal failure	10 seconds		
Switch-on delay	0,02 seconds		
Indicators	Led Status	Yellow regular	System switch on
		Yellow	System without alarm
		Yellow blinking	Waiting program
		Green alarm	Lower temperature
		Red alarm	Temperature alarm
		Green led	GSM communication

Specifications

Room Temperature	Working T°	-5°C to 50 °C
	Storage T°	-10°C to 60 °C
Room humidity	Working	5% to 85%
	Storage	5% to 85%
Power supply	Max. consumption (during Battery charge) 5 W	
	1-4 terminals allows 12VDC of supply for other device	
Supply frequency (AC)	50 / 60 Hz	
Output relays	Resistive load	5 A at 250 VAC (cosφ = 1)
		5 A at 30 VDC (L / R = 0 ms)
	Inductive load	1 A at 250 VAC (cosφ = 0,4)
		1 A at 30 VDC (L / R = 7 ms)
Mechanical Life	10 ⁷ cycles	
Electrical Life	3 x 10 ⁴ cycles	
Mounting	Pannel mounting with accessory for rail DIN SMX-DIN	
Dimensions	146 x 105 x 45 mm	
Weight	166 gr	
IP protection	IP 40	
CE marking	Yes	

Uses and applications

- Monitoring in real time and programming the temperature.
- Food warehouses.
- Heating and freezing systems.
- Cold stores.
- Computer installations.
- Laboratories.
- In every place where the temperature is important to control.

SMX-G50 module is the solution for the remote monitoring and control the temperature.

The SMS temperature information will be received in the mobile phone, also the variations of all values, installation state and fails. The mobile phone sends a SMS to the module programming the relays output and control the device.

The Kit has SMX-G50, antenna FME, RS232 cable, and power supply.

Functions

- » Output relay control by SMS, (Two output relays).
- » Battery supply option to avoid electricity fails. Inform of power supply failure by SMS.
- » Inform of the temperature changes according with the program by SMS.
- » Inform of connection fail or failure of the temperature sensor by SMS.
- » Two alarms input that advice by SMS when they open or close according with the program.
- » Control the output relays using X10 module.
- » The relays 2 and 3 can be controlled for switch-on or switch-off and timing.
- » It can send orders to any X10 device.

Dimensions (mm-inch)

Accessories

- » Temperature sensor "SMX-TEM".
The external temperature sensor has a range between -25 °C to 85°C.
- » Battery "SMX-BAT".
Plum battery of 2V with 800mA, in box format with jack connector for SMX-G50.
- » Antennas "SMX-AN1" and "SMX-AN2".
- » Rail DIN accessory "SMX-DIN".

Features

- Programmable by SMS and Gplus software free. Protected by password.
- Information return without programming necessities.
- Two digital Inputs one to connect a external thermostat.
- Connection with X10 devices.
- Three output relays are controlled for Switch-on or off and timing.
- Manual push button control the relay 1 allowing pass from switch-on to switch-off only pushing time to time.
- Reset push button to return factory program.
- Control the relay 1 output to X10 address working like a heating system according with the thermostat input allowing switch-on or switch-off and timing and fix a value with the external thermostat.
- Alarm of Max and Min. temperature.
- the alarms can be sent to 3 mobile phones.
- Indication LED state of the heating system and GSM communication.

Nominal values

Supply voltage	Supply not battery charging	10 - 28 V	
	Supply battery Charging	17 - 28 V	
Communication	GSM 4 bands 800/900/1.800/1.900 MHz		
	Cinterion modem MC55i		
Modem reboot delay in case of signal failure	10 seconds		
Switch-on delay	0,02 seconds		
Indicators	Led Status	Yellow regular	System switch on
		Yellow	System without alarm
		Yellow blinking	Waiting program
		Green alarm	Lower temperature
		Red alarm	Temperature alarm
	Green led	GSM communication	

Specifications

Room Temperature	Working T°	-5°C to 50 °C
	Storage T°	-10°C to 60 °C
Room humidity	Working	5% to 85%
	Storage	5% to 85%
Power supply	Max. consumption (during Battery charge) 5 W	
	1-4 terminals allows 12VDC of supply for other device	
Supply frequency (AC)	50 / 60 Hz	
Output relays	Resistive load	5 A at 250 VAC (cosφ = 1) 5 A at 30 VDC (L / R = 0 ms)
	Inductive load	1 A at 250 VAC (cosφ = 0,4) 1 A at 30 VDC (L / R = 7 ms)
	Mechanical Life	10 ⁷ cycles
	Electrical Life	3 x 10 ⁴ cycles
Mounting	Pannel mounting with accessory for rail DIN SMX-DIN	
Dimensions	146 x 105 x 45 mm	
Weight	166 gr	
IP protection	IP 40	
CE marking	Yes	

Uses and applications

This remote control module can be used in all the industrial and domotic instalations in special cases that the electrical system needs to be controlled in an easy way and in distance.

- Garage doors.
- External control of temperature systems.
- Cooling and heating systems.
- Domotic and industrial automation.

In every place where the temperature is important to control.

Devices Programmer is a software for easy configuration to use with a friendly graphic in which can be selected the different functions for each module.

Devices Programmer is a tool that allows to edit, compile and download the implemented program into the module's memory.

» The software has a main menu and each function has a short description about it.

» It is possible to select the language among English, French, Spanish and German.

» The software can be downloaded from our website www.relequick.com, freely.

» Always to program our modules, you need to use our cable converter series - USB CPCD01.

» Easy selection among the different modules.

This software can be use to program the following modules: MQPMM, RFS1, MCU and MPH. Sooner in more modules.

Note: you must disconnect the power supply of the module before connecting it with the PC.

» To create a program is simple and intuitive in that software, allowing the development of complex programs with our modules.

» You can save the program in your computer, so you can load the program developed in all the modules you want.

Programming modules RFS1 and MQPMM

» The program allows you to select the appropriate functions in an easy way through various windows and drawings for each function.

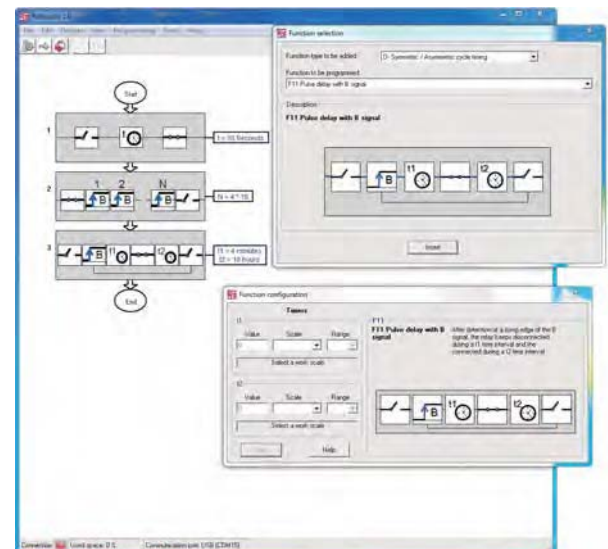

» All functions are placed in the main window in order to easily see the program that you are editing.

» The program is developed as a "flow diagram" in the workspace for an easy understanding

» "Devices Programmer" allows to program many functions in the same module making chains of functions and jumping between them.

» Allows to change the functions programmed only with a "Click".

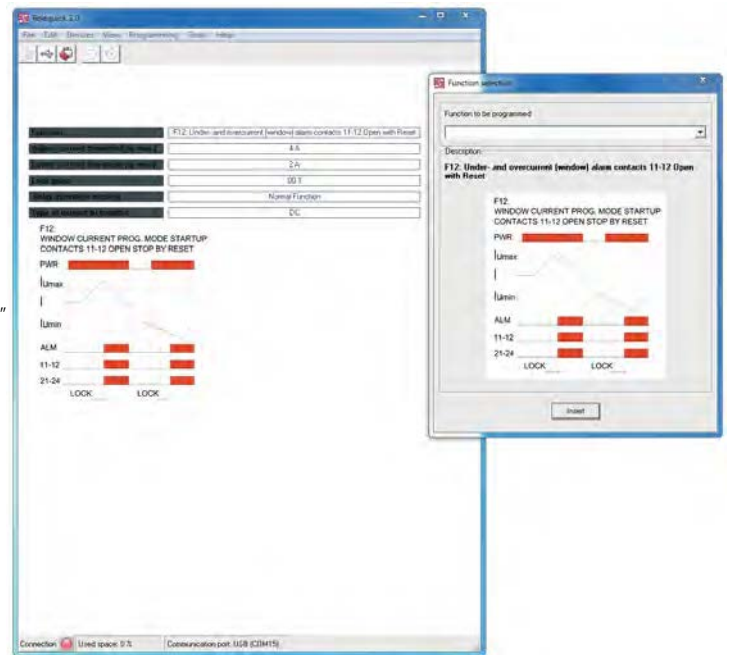

» The flow diagram of the program finalizes with the word "End" or with a flowchart jump making a loop.

Programming modules MCU and MPH

- The module has a factory program installed that may be programmed by selectors. The software allows program different functions by the USB cable. It also allows back to factory mode.
- The function programmed by the software gets more accuracy than the program made by the potentiometers.
- The programs of these modules are shown so that understanding is easy and intuitive .
- Allows to change the functions programmed only with a "Click"

Programming the modules

Once the program is finished, it can be downloaded into the module in three very easy steps:

1. Create a connection with the module:
 - Choice the USB communications port in "Programming > Port".
 - Establish the communication "Click" in the icon and the signal of the connection will change to green.
2. Compile the program.
 - Compile the program "Click" in the next icon:
3. Download the program in the module memory.
 - Download the program "Click in the next icon:

Note: you must turn-off the power supply of the module before to connect the module with the PC.

Functions of RFS1 solid state relay programmable

	Function name	Initial state	Diagram	Description
Simple timer	Switch-on delay			Delay timing (t time) to the connection of the relay.
	Switch-off delay			Delay timing (t time) to the disconnection of the relay.
Symmetric and asymmetric cycle timing functions	Pulse delay			After a t1 delay the relay is switched on, and keeps on for a t2 lapse. The delay begins when the module is powered.
	Symmetric timing cycle (starting closed)			Once the module is powered a symmetric cycle begins, being the relay closed for a t timelapse and open during the next t interval.
	Symmetric timing cycle (starting open)			Once the module is powered a symmetric cycle begins, being the relay open for a t timelapse and closed during the next t interval.
	Asymmetric timing cycle (starting closed)			Once the module is powered an asymmetric cycle begins, being the relay closed for a t1 timelapse and open during a t2 interval.
	Asymmetric timing cycle (starting open)			Once the module is powered an asymmetric cycle begins, being the relay open for a t1 timelapse and closed during a t2 interval.
	DC load regulation	PWM progressive connection ramp (for DC loads)		
PWM progressive disconnection ramp (for DC loads)				The relay is disconnected slowly as a progressive disconnection ramp (PWM). It is completed during the specified time t.

Functions MQPMM timer and counter module

A - SIMPLE TIMER

F0:CONNECTION DELAY

Once the system is supplied with a voltage U, after a time t, the relays R1 and R2 will be activated simultaneously. (the relay R2 is only available for models MTIR2 and MTIR2 MODBUS)

A - SIMPLE TIMER

F1:DISCONNECTION DELAY

Once the system is supplied with a voltage U, after a time t, the relays R1 and R2 will be deactivated simultaneously. (the relay R2 is only available for models MTIR2 and MTIR2 MODBUS)

B - TEMPORIZED WITH SIGNAL B1

F2:CONNECTION DELAY BY FLANK

Once the system is supplied with a voltage U, when an up flank of the signal B1 is produced, the relays R1 and R2 will be activated simultaneously after a time t. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function. (the relay R2 is only available for models MTIR2 and MTIR2 MODBUS).

B - TEMPORIZED WITH SIGNAL B1

F3:ACTIVATION WITH U AND DISCONNECTION DELAY BY FLANK EDGE OF SIGNAL B1

Once the system is supplied with a voltage U, the relays R1 and R2 will be activated. When an up flank of the signal B1 is produced, the relays R1 and R2 will be deactivated simultaneously after the programmed time t. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function. (the relay R2 is only available for models MTIR2 and MTIR2 MODBUS).

B - TEMPORIZED WITH SIGNAL B1

F4:DISCONNECTION DELAY BY DOWN FLANK, WITH RELAY CONNECTION BY UP FLANK OF SIGNAL B1

Once the system is supplied with a voltage U, When an up flank of the signal B1 is produced, the relays R1 and R2 will be activated simultaneously. With the flank down of the same pulse, a time t starts and at the end of that time the relays R1 and R2 will be deactivated simultaneously. If before the end of time t there is a new pulse of the signal B1, a new time t will begin with the down flank of the second B1 and at the end of this time t the relays R1 and R2 will be deactivated simultaneously and so forth. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function. (the relay R2 is only available for models MTIR2 and MTIR2 MODBUS).

B - TEMPORIZED WITH SIGNAL B1

F5:DISCONNECTION DELAY BY UP FLANK OF SIGNAL B1

Once the system is supplied with a voltage U, When an up flank of the signal B1 is produced, the relays R1 and R2 will be activated simultaneously for a time t. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function. (the relay R2 is only available for models MTIR2 and MTIR2 MODBUS).

B - TEMPORIZED WITH SIGNAL B1

F6:DISCONNECTION DELAY BY FLANK DOWN OF SIGNAL B1

Once the system is supplied with a voltage U, When a down flank of the signal B1 is produced, the relays R1 and R2 will be activated simultaneously for a time t. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function. (the relay R2 is only available for models MTIR2 and MTIR2 MODBUS).

B - TEMPORIZED WITH SIGNAL B1

F7:DISCONNECTION DELAY BY UP OR DOWN FLANK OF SIGNAL B1

Once the system is supplied with a voltage U, When an up flank of the signal B1 is produced, the relays R1 and R2 will be activated simultaneously for a time t. If before the end of time t there is a down flank of the signal B1, the relays R1 and R2 will remain active again a time t from the down flank of the signal B1. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

B - TEMPORIZED WITH SIGNAL B1

F8:DISCONNECTION DELAY INTERRUPTIBLE BY UP FLANK OF SIGNAL B1

Once the system is supplied with a voltage U, and after the programmed time t, the system will start to count the time of duration t1 when the first pulse of B1 is finished. It will count for a time "a", it will be interrupted by a second pulse of B1 of duration t2 and at the end of the second pulse the system will start to count for a time "b", once the time "b" is finished the relays R1 and R2 will be activated simultaneously and remain active while power is supplied. So the total delay will be the sum of t + t1 + t2 etc., also t will be the sum of a+b+c...+n interruptions. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

B - TEMPORIZED WITH SIGNAL B1

F9:CONNECTION DELAY INTERRUPTIBLE BY DOWN FLANK OF SIGNAL B1

Once the system is supplied with a voltage U, and after a programmed time delay t, this shall begin with the start of the first pulse duration B1 "a", will be interrupted by the down flank of the first pulse B1, it will be stopped a time t1 to start again with the second pulse duration B1 "b", will be interrupted by the down flank of the second pulse B1 and it will be stopped a time t2 to start again with the third pulse duration B1 "c", and elapsed a time t3 relays R1 and R2 will be activated until supply termination. The total retarded time will be the sum of t+t1+t2+t3 etc., also t will be the sum of a+b+c...+n pulse times. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F10:PULSE DELAY

Once the system is supplied with a voltage U, after a programmed time delay t1, the relays R1 and R2 will be activated simultaneously for a time t2.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F11:PULSE DELAY WITH SIGNAL B1

Once the system is supplied with a voltage U, after an up flank of the signal B1, it starts a delay time t1 after which the relays R1 and R2 will be activated simultaneously for a time t2. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F12:SYMMETRIC TIMING CYCLE (INITIALLY ACTIVATED)

Once the system is supplied with a voltage U, a symmetric timing cycle starts with time value "t" for the activation and time t for the deactivation until supply termination. The relays R1 and R2 are initially activated.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F13:SYMMETRIC TIMING CYCLE (INITIALLY DEACTIVATED)

Once the system is supplied with a voltage U, a symmetric timing cycle starts with time value "t" for the activation and time t for the deactivation until supply termination. The relays R1 and R2 are initially deactivated.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F14:ASYMMETRIC TIMING CYCLE (INITIALLY ACTIVATED)

Once the system is supplied with a voltage U, an asymmetric timing cycle starts with time value "t1" for the activation and time "t2" for the deactivation until supply termination. The relays R1 and R2 are initially activated.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F15:ASYMMETRIC TIMING CYCLE (INITIALLY DEACTIVATED)

Once the system is supplied with a voltage U, an asymmetric timing cycle starts with time value "t1" for the activation and time "t2" for the deactivation until supply termination. The relays R1 and R2 are initially deactivated.

E - SIMPLE COUNTING

F16:COUNTER TO CONNECTION BY "N" UP FLANKS OF SIGNAL B1

Once the system is supplied with a voltage U, when the system receives n pulses of the signal B1 the relays R1 and R2 will be activated in the up flank of the n pulse of the signal B1 and will remain activated until supply termination. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

E - SIMPLE COUNTING

F17:COUNTER TO DISCONNECTION BY "N" UP FLANKS OF B1

Once the system is supplied with a voltage U, when the system receives n pulses of the signal B1 the relays R1 and R2 will be deactivated in the up flank of the n pulse of the signal B1. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

G - SYMMETRIC / ASYMMETRIC COUNTING

F18:SYMMETRIC COUNTER CYCLE BY "N" UP FLANKS BY B1 (INITIALLY ACTIVATED)

Once the system is supplied with a voltage U, the relays R1 and R2 will remain active until the arrival of "n" pulses of signal B1. When the up flank of the pulse n of the signal B1 arrives, the relay R1 and R2 will be disconnected. The relays will remain on that state until the arrival of new n pulses of signal B1, activating the relays with the up flank of the pulse n of the signal B1 arrives. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

Index category	Category description	Index category	Category description
A	Simple timer	E	Simple counter
B	Temporized functions with signal B1	F	Complex counter
C	Temporized functions with signal B1 and B2	G	Counter Asymmetric /Symmetric
D	Temporized symmetric/asymmetric	H	Load controls DC (pwm)

G - SYMMETRIC / ASYMMETRIC COUNTING

F19: SYMMETRIC COUNTER CYCLE BY "N" UP FLANKS BY SIGNAL B1 (INITIALLY DEACTIVATED)

Once the system is supplied with a voltage U, the relays R1 and R2 will remain inactive until the arrival of "n" pulses of signal B1. When the up flank of the pulse n of the signal B1 arrives, the relays R1 and R2 will be activated. The relays will remain on that state until the arrival of new n pulses of signal B1, deactivating the relays with the up flank of the pulse n of the signal B1 arrives. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

F - COMPLEX COUNTING

F28: SYMMETRIC COUNTING FOR "N" DOWN FLANKS OF SIGNAL B1 (INITIALLY DEACTIVATED) AND "N" DOWN FLANKS OF SIGNAL B2

Once the system is supplied with a voltage U, the relays R1 and R2 will remain inactive until the arrival of n pulses of the signal B1. With the down flank of the pulse number n of the signal B1 the relays R1 and R2 will be activated. The relays will remain activated until the arrival of an up flank of signal B2. With the arrival of the up flank of the pulse n of the signal B2, the relays R1 and R2 will be deactivated. This function is available for MTIR2.

G - SYMMETRIC / ASYMMETRIC COUNTING

F20: ASYMMETRIC COUNTER CYCLE BY "N1" AND "N2" UP FLANKS OF SIGNAL B1 (INITIALLY ACTIVATED)

Once the system is supplied with a voltage U, the relays R1 and R2 will remain active until the arrival of n1 pulses of signal B1. When the up flank of the pulse n1 of the signal B1 arrives, the relays R1 and R2 will be deactivated. The relays will remain on that state until the arrival of new n2 pulses of signal B1, activating the relays with the up flank of the pulse n2 of the signal B1 arrives. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

F - COMPLEX COUNTING

F29: ASYMMETRIC COUNTING FOR "N1" DOWN FLANKS OF SIGNAL B1 (INITIALLY DEACTIVATED) AND "N2" DOWN FLANKS OF SIGNAL B2

Once the system is supplied with a voltage U, the relays R1 and R2 will remain inactive until the arrival of n1 pulses of the signal B1. With the down flank of the pulse number n1 of the signal B1 the relays R1 and R2 will be activated. The relays will remain activated until the arrival of an up flank of signal B2. With the arrival of the up flank of the pulse n2 of the signal B2, the relays R1 and R2 will be deactivated. This function is available for MTIR2.

B - TEMPORIZED WITH SIGNAL B1

F21: UP FLANK DELAY NEST-ABLE BY SIGNAL B1

Once the system is supplied with a voltage U, with the up flank of a signal B1 is initiated a disconnection delay of the relay R1 and R2 with time t. If before the end of it is received another pulse of signal B1, then the relays will be activated a time t from the flank edge of this second pulse of signal B1. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

B - TEMPORIZED WITH SIGNAL B1

F30: UP FLANK DELAY OF SIGNAL B1 BETWEEN RELAY CONNECTIONS OF R1 AND R2

Once the system is supplied with a voltage U, with the up flank of a signal B1 the relay R1 will be activated for a programmed time t. Elapsed this time, the relay R1 will be deactivated and the relay R2 will be activated until supply termination, the state of this signal B2 is irrelevant in this function. This function is available for MTIR2.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F22: LOCKING AND CUTTING CYCLE WITH SIGNAL B1

Once the system is supplied with a voltage U, when an up flank of the signal B1 a connection delay with time t1 is initiated for the relays R1 and R2, after de up flank of the signal B1, a disconnection delay with time t is initiated for the relays R1 and R2. In the modules that have input B2, as MTIR2, the state of this signal B2 is irrelevant in this function.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F31: PULSE DELAY (R1 INITIALLY ACTIVATED AND R2 INITIALLY DEACTIVATED)

Once the system is supplied with a voltage U, a connection delay of the relays R1 with programmed time t1 is initiated. Elapsed this time, the relay R1 will be deactivated and the relay R2 will be activated, then a disconnection delay of the relay R2 with programmed time t2 will be initiated for relay R2. This function is available for MTIR2.

A - SIMPLE TIMER

F23: CONNECTION DELAY BETWEEN RELAYS R1 AND R2

Once the system is supplied with a voltage U, the relay R1 will be activated, after a time t, the relay R1 will be deactivated and the relay R2 will remain activated until supply termination. This function is available for MTIR2.

B - TEMPORIZED WITH SIGNAL B1

F32: PULSE DELAY FOR UP FLANK OF B1 (INITIALLY R1 ACTIVATED AND R2 INITIALLY DEACTIVATED)

Once the system is supplied with a voltage U, after the up flank of the signal B1, a connection delay of the relays R1 with programmed time t1 is initiated. Elapsed this time, the relay R1 will be deactivated and the relay R2 will be activated, then a disconnection delay of the relay R2 with programmed time t2 will be initiated, the state of this signal B2 is irrelevant in this function. This function is available for MTIR2.

C - TEMPORIZED WITH SIGNAL B1 AND B2

F24: CONNECTION DELAY BY UP FLANK OF SIGNAL B1 AND DISCONNECTION DELAY BY UP FLANK OF SIGNAL B2

Once the system is supplied with a voltage U, with the up flank of signal B1 is initiated a connection delay of the relays R1 and R2 with time t1. The relays will remain active until the arrival of an up flank of signal B2, which it will start a disconnection delay of the relays R1 and R2 with time t2. This function is available for MTIR2.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F33: SYMMETRIC CYCLE TIMED (R1 INITIALLY ACTIVATED)

Once the system is supplied with a voltage U, a symmetric cycle timed is initiated with a programmed time t. The first relay to be activated is the relay R1. This function is available for MTIR2.

C - TEMPORIZED WITH SIGNAL B1 AND B2

F25: CONNECTION DELAY BY DOWN FLANK OF SIGNAL B1 AND DISCONNECTION DELAY BY DOWN FLANK OF SIGNAL B2

Once the system is supplied with a voltage U, with the down flank of signal B1 is initiated a connection delay of the relays R1 and R2 with time t1. The relays will remain active until the arrival of a down flank of signal B2, which it will start a disconnection delay of the relays R1 and R2 with time t2. This function is available for MTIR2.

D - TEMPORIZED SYMMETRIC / ASYMMETRIC

F34: ASYMMETRIC CYCLE TIMED (R1 INITIALLY ACTIVATED)

Once the system is supplied with a voltage U, an asymmetric cycle timed is initiated with programmed times t1 and t2. The first relay to be activated is the relay R1. This function is available for MTIR2.

C - TEMPORIZED WITH SIGNAL B1 AND B2

F26: CONNECTION DELAY BY UP FLANK OF SIGNAL B1 AND DISCONNECTION DELAY BY DOWN FLANK OF SIGNAL B2

Once the system is supplied with a voltage U, with the up flank of signal B1 is initiated a connection delay of the relays R1 and R2 with time t1. The relays will remain active until the arrival of a down flank of signal B2, which it will start a disconnection delay of the relays R1 and R2 with time t2. This function is available for MTIR2.

H - LOADS CONTROL DC (PWM)

F35: LOAD CONTROLS ON DC WITH POTENTIOMETER REGULATOR

Once the system is supplied with a voltage U, when you insert the potentiometer regulator in the RFS1LS connector, you can control the DC load with a generated PWM signal.

F36: PWM EDGE OF PULSE WIDTH FOR DC LOADS

Once the system is supplied with a voltage U, a modulation connection pulse width starts in relay R1, increasing the pulse width on ramp edge during a t time.

C - TEMPORIZED WITH SIGNAL B1 AND B2

F27: CONNECTION DELAY BY DOWN FLANK OF SIGNAL B1 AND DISCONNECTION DELAY BY UP FLANK OF SIGNAL B2

Once the system is supplied with a voltage U, with the down flank of signal B1 is initiated a connection delay of the relays R1 and R2 with time t1. The relays will remain active until the arrival of an up flank of signal B2, which it will start a disconnection delay of the relays R1 and R2 with time t2. This function is available for MTIR2.

H - LOADS CONTROL DC (PWM)

F37: PWM DOWN OF PULSE WIDTH FOR DC LOADS

Once the system is supplied with a voltage U, a modulation connection pulse width starts in relay R1, decreasing the pulse width on ramp edge during a t time.

Index category	Category description	Index category	Category description
A	Simple timer	E	Simple counter
B	Temporized functions with signal B1	F	Complex counter
C	Temporized functions with signal B1 and B2	G	Counter Asymmetric /Symmetric
D	Temporized	H	Load controls DC (pwm)
